## ADC EXTRACTS YOUR FINANCIAL DATA

By aggregating data from your Sage 300 CRE solution, Anterra Data Center (ADC) transports your data to a SQL repository, ready for analysis.

Once the data is extracted and aggregated, data engineering techniques can be applied to **structure the data**. This step is crucial for maintaining the integrity and accuracy of the data, which directly impacts the quality of reporting.

These capabilities allow you to **extend the life of your current Sage 300 CRE solution**.

Realize the full benefit of the cloud without the cost and headache of migrating to a new cloud ERP. No new server is required, no solid-state drives are required. All of your data, at a fraction of the cost!

## ANTERRA DATA CENTER

## SQL SERVER REPLICATION FOR SAGE 300 CRE

### WORK FASTER

Seamless integration from Pervasive to SQL, ensuring your data is more accessible and your existing Sage and Crystal reports run faster when you connect to SQL.

### UNLIMITED DATA

Run reports that combine information and results from multiple servers and multiple data folders.

### CONSOLIDATE DATA

Anterra Data Center creates a single database containing ALL of your data folders.

### SYNC YOUR WAY

Set up a schedule (like off-hours) or sync continuously – only new data syncs for true reconciliation.

## 14 DAY FREE TRIAL

Unlock the potential of SQL-speed reporting!  
No strings attached, no hassle – just pure efficiency.  
Start your journey to seamless data integration today.
